EDUCATION

Masters in Computer Science , University Of Central Missouri	Aug 2024 – May 2026
Coursework : Algorithms Python Visualization Operating Systems Compiler Design MongoDB	
Vignan's Nirula Institute Of Technology &Science , Bachelor's of Computer Science & Engineering	Aug 2018 – Jul 2022

WORK EXPERIENCE

Software ENGINEER , Wipro	May 2022 – Sep 2024
- Engineered backend services using Java and Spring Boot, improving system scalability and reducing downtime across distributed microservices. - Developed and optimized complex SQL queries and relational data models, enhancing data retrieval performance by 40%. - Automated testing pipelines and integrated API validation workflows using JUnit, Postman, and Octane Pro Tool, reducing regression issues by 30%. - Collaborated across cross-functional agile teams to plan sprints, prioritize feature rollouts, and release stable, production-ready software under tight deadlines. - Contributed to improving system observability and debugging processes, leading to a 25% reduction in critical issue resolution time.	
Software Intern , Wipro	March 2022 – May 2022
- Built and tested Spring Boot-based microservices for banking applications, focusing on REST API development, data integrity, and modular architecture. - Managed and queried relational databases with MySQL, improving backend data flows and system responsiveness. - Participated in integration testing for distributed systems, ensuring seamless module interactions and increasing reliability by 20%. - Conducted code reviews, wrote documentation, and followed agile principles to support continuous delivery and rapid iteration.	

Languages: Java, Python, C++, JavaScript, SQL, C, Perl (basic)
Frameworks & Tools: Spring Boot, REST APIs, JUnit, Postman, Docker, Octane Pro Tool, Agile/Scrum, Git
Databases: MySQL, PostgreSQL, MongoDB
Concepts: OOPS, Data Structures, Algorithms, OS, Complexity Analysis, Distributed Systems, Linear Optimization (basic)
Others: API Testing, Integration Testing, CI/CD Exposure, Tableau, Pandas, Matplotlib, Responsive UI (basic), Optical Imaging, Machine Learning (basic)

Publications Projects

Salt body segmentation based on edge detection using deep supervised learning Research Link
- Pioneered a deep-supervised convolutional neural network (CNN) architecture for accurate segmentation of salt bodies in seismic images, improving geophysical exploration efficiency by 25%. Introduced an additional edge-prediction branch to enhance feature learning using boundary loss guidance. - Utilized the Sigmoid activation function to achieve accurate binary masks of salt body regions. - Specialized in developing deep learning models for optical imaging applications, leading to a 30% improvement in the accuracy of salt body detection and reduced uncertainty in energy exploration.
Direct Deliverables , Client : Kellogg's
- Developed scalable backend services using Java and Spring Boot, enhancing system reliability. - Optimized SQL queries and data models, improving retrieval speed by 40%. - Automated API testing with JUnit, Postman, and Octane, cutting regression issues by 30%. - Collaborated in agile teams to plan sprints and deliver stable, production-ready software. - Improved system debugging and observability, reducing critical issue resolution time by 25%.
